PlowWow™

SNOW INTELLIGENCE · FIRST-YEAR BETA

Experience meets what comes next.

Better questions. Clearer service communication. Technology shaped by winter work—and by your feedback.

AI-generated winter-driving concept still from the supplied Gemini PDF. This is illustrative artwork, not a live dashboard, a field test or proof of app functionality.

We are exploring how useful site information, service records and clearer communication could support snow crews, property managers and residents.

PlowWow™

SNOW INTELLIGENCE · FIRST-YEAR BETA

New software.
Real winter questions.

What should the client know?

Was the property visited? What work was recorded? What remains? Which communication tools are actually enabled for this property?

What are we exploring?

Site-hazard mapping concepts, AI-assisted photo review and clearer service records. These are development directions; advanced feature availability and performance are not confirmed here.

What is available to try?

The public pricing calculator provides a provisional starting estimate for an enquiry. Confirm property scope, service capacity and beta access directly with PlowWow.

What experience informs the idea?

Our founder reports 15 snow-removal seasons, four seasons of North American marketing through a previous brand and 25 years in contracting. The software is in its first year of beta.

No photo-based salt measurement, AR navigation performance, legal protection, insurance savings or automated billing capability is certified by this concept brief.

Help shape the beta.
